PROFESSIONAL LOUDSPEAKERS

EM508 Overview

The élite line includes a complete range of premium quality floor monitors. These two-way wedges carry over the curved, full grille look of their upright counterparts and provide clear sound for precise monitoring in a rugged and highly reliable package. Each unit has an optional, dedicated processor which enhances performance and allows optimum use of a subwoofer. For maximum versatility all monitors include a flush-mounted stand adapter so that they can be used as Front Of House speakers.

Onstage, a unique low profile élite design makes these monitors less of a viewing obstruction for front-row audience members, and all models can be positioned at two floor angles for close or wide coverage. Ruggedness is assured by Yorkville's proven construction techniques & design, top quality components, heavy curved metal grilles and durable black carpet covering. Recessed handles and metal corner protectors are standard on all units.

Based on Yorkville's powerful **TX4**, the bi-ampable **EM508** floor monitor can be positioned at either 60 or 40 degrees for better controlled stage coverage. The unique shallow, directional horn on the **EM508** allows maximum driver loading while the 850Hz crossover point ensures even output throughout the target zone of the monitor.
